TermStar

TermStar

On clear terms

Create something new with what you have already

Glossaries, word lists, Excel tables, TBX, custom formats: TermStar's flexible import function enables you to transfer and merge your existing terminology resources into TermStar with the aid of step-by-step software wizards. This then gets you where you want fast, even if you have very little previous terminology management experience.

And if you've not worked with terminology at all before, TermStar and Transit will help you build a basic stock of terms in next to no time: The convenient terminology extraction function can identify potential dictionary entries from your project and create a well-stocked dictionary with just a couple of clicks.
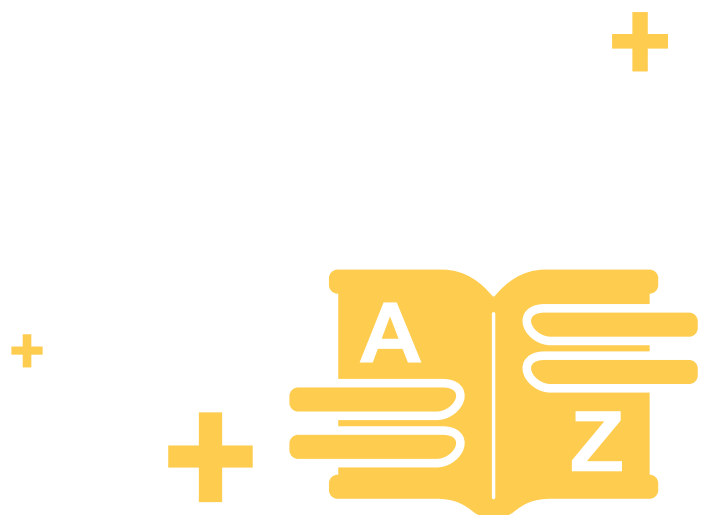

## Comprehensive yet flexible: The TermStar data model

The TermStar data model consists of a predefined set of over 10 entry types and more than 40 entry fields that can be custom configured and used. If you're only just venturing into terminology work, employing a tried-and-tested data model means you don't have to start from scratch – you can simply use the entry types and fields that are relevant to you.

If you already have a complex terminology system and extensive terminology resources, you can take full advantage of the data model by configuring it to your specific needs. And if you're somewhere in between, the TermStar data model can help you too, by growing flexibly to suit your particular requirements.

The benefits for you

- A company-wide terminology pool for clear global communication through the use of consistent and standardised company wording

- Numerous interfaces and exchange formats for gathering, applying and using terminology

- Can be flexibly configured to suit your company's specific terminology needs

- An efficient working environment thanks to having a user interface, views and dictionary layouts that are fully customisable

- A comprehensive data model with freely configurable value lists, input validation checks and filter functions

- Secure pooling of terminology resources thanks to complex import and synchronisation functions
